(54) SURFACE ILLUMINANT DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a surface illuminant device which has made a distribution of illumination light as uniform as possible over the entire surface of a light guide plate by preventing a light part and a dark part from being alternately caused on the side close to the light source of the light guide plate even when a light source having large directivity of projected light is used.

SOLUTION: The surface illuminant source device having the light guide plate which receives the light from lights source from its end surface and projects it on a body to be lighted up has the multiple light sources with directivity and the single light guide plate which receives the light from the light sources and projects it on the body to be lightened up; and the end surface of the light guide plate on which the light from the light sources is made incident is formed on the surface slanted to the external shape of the light guide plate.
